## REQUEST FOR PROPOSAL NO: 301673, Amendment No. 01

### TITLE: Off Site Fabrication of Ion Exchange Modules

July 5, 2016

Dear Prospective Offeror:

Request for Proposal No: 301673  
Addendum No. 1 – Questions & Answers

Below is the list of questions received to date and the corresponding answers. Offerors should review all questions and answers and take them into consideration in preparing their proposal.

1. Why aren't prospective bidders technically pre-evaluated and approved before the e-auction event? Not pre-screening bidders will allow none technically competent bidders who do not understand the bid requirements and who have potentially not included costs to meet the requirements submit low bids that will potentially be rejected after the e-auction. This is an exact scenario has happened to us before. This does not seem to allow for a fair bid process on a very complicated project.

**A: Refer to RFP for qualifications, standards and evaluation criterion. CHPRC will stay with our current RFP selection methodology and not change as requested.**

2. Section 4.2.C Personal Capability Section, asks that the vender submit personal qualifications for a professional engineer. There is no requirement in specification SNF-4198 Rev. 5 asking for a PE stamp on anything and ASME Section VIII Div. 1 does not require a PE stamp on pressure vessel calculations or drawings. What is your purpose to include personal qualifications for a professional engineer if there is no requirement for anything to be stamped?

**A: PE stamp requirement is deleted.**

3. Section 6.2 Quality Control of the SOW, states "In addition, the contract supplier must maintain a current National Ready Mix Concrete Association Certificate of Conformance for concrete production facilities. Can our concrete supplier sub-vender hold this certificate (SNF-4198 Rev. 5 Section 3.5.11 states the concrete production facility will have this certification) or is it your intent that the Contract supplier / fabricator also hold this certificate?

**A: Only the concrete supplier.**

4. Section 6.3.9 of the SOW states" NDE personnel shall be qualified and certified in accordance with (ANST) SNT-TC-1A-2001, unless otherwise specified in the ordering data. Can NDE personnel be qualified and certified to the latest ASME code accepted addition in lieu of the out dated 2001 edition?

**A: Yes.**
