## CHPRC Craft Specific Safety Hazards Analysis

Version 4, 7/13/2017

Page 2 of 4

### 1.0 INTRODUCTION

#### 1.1 Purpose

This hazard analysis applies to any Teamster, Building Trades employed by CH2M HILL Plateau Remediation Company (CHPRC) or Other Hanford Contractor (OHC) performing general craft specific work activities for CHPRC. The Craft Specific Hazard Analysis (CHA) covers general work activities performed routinely with limited, or no, work instructions and applies to those hazards that are not normally covered in work instructions, or technical procedures.

#### 1.2 Scope

The CHA lists, by craft discipline, the hazards each craft person may be exposed to while performing work within their positions defined by the Building Trades Contract. Craft members, by discipline, are trained and experienced to recognize and mitigate those hazards consistent within their discipline.

This hazard analysis covers the Teamster, Building Trades performing general craft specific work activities. This hazard analysis is used in conjunction with the General Industrial Hazards Analysis document, and does not cover the environment in which these activities may be performed.

#### 1.3 Applicability

Every CHPRC employee is expected to work safely and to maintain a safe work environment. The GHA and CHA documents identify the control measures for routine industrial hazards common to the core activities of the workers' assigned job position.

This hazard analysis is to be used in conjunction with PRC-WKM-PRO-079, Job Hazard Analysis, and Appendix B. After reviewing the work scope, location, the hazards involved, an evaluation is made to determine if this hazard analysis adequately bounds the work activity and can be considered skill-based.

### 2.0 RESPONSIBILITIES

The tasks listed are examples of the variety and general nature of duties performed by a Teamster, Building Trades. The list is descriptive only and should be used for no other purpose. It is not intended that any position include every duty listed nor is it intended that related duties cannot be required.

Activity / Hazard	Control
<b>Loading &amp; Unloading Cargo &amp; Heavy Equipment</b>	Maintain Situational Awareness, take time to pay attention and understand your surroundings  Identify measures to secure the balance of the load when loading and unloading  Observe payload/trailer load weight limits (including tongue load limits)  Ensure the brakes are set prior to exiting the equipment  Ensure the equipment has been properly secured prior to crawling underneath or getting underneath equipment on the trailer
<b>Snow and ice removal on Roadways, Parking Lots, Sidewalks, Steps, and Other Areas as Needed.</b>	Warm up and stretch out prior to activity.  Use proper lifting techniques  Wear traction devices appropriate for the surface conditions  Do not attempt to singularly lift objects that exceed physical capabilities or are greater than 55 pounds (24.95 kgs) without a hazard analysis.
<b>Working Around a Moving Vehicle</b>	Maintain Situational Awareness, take time to pay attention and understand your surroundings.  Maintain an agreed upon means of communication between driver and ground crew. (Verbal, Radio, Hand signals, etc.)  Know the travel path of the moving vehicle and avoid the vehicle.
